

BNS Correspondence - 3 August 2026

SUPPLIED COPY / TYPED EXTRACT ONLY. Preserve and exhibit the original email chain. Obtain a signed witness statement from an appropriate BNS witness and underlying records before relying on these allegations at hearing.

Reported source

Email from Tina Munford, BNS Management Services, to Mr and Mrs W Mumford, dated 3 August 2026, concerning Flat 7, Machin Mews.

Summary of reported matters

BNS reported that engineers and cleaners were unable to work in the block because of an extreme smell of cat urine which BNS said originated from Flat 7. BNS said that this was blocking essential works, including an Electrical Installation Condition Report (EICR) which had been awaited since May. BNS said the engineers refused to work in the area around the electrical cupboard until the odour was controlled.

BNS further reported that it had previously written to the tenant requesting removal of cats because management-company permission had not been obtained, and requesting that mess outside the flat door be cleaned. BNS reported complaints from other residents and said that it wished to return to complete the EICR within two weeks but that its engineers would not enter until the reported biohazard situation was resolved.

Required corroboration

Request the original email in native or complete forwarded form; the earlier cat-permission / cleanup correspondence; EICR appointment and refusal records; engineer and cleaner statements or attendance notes; complaint log; and any inspection, environmental-health or remediation evidence.
